

6. THE EFFECT OF ACADEMIC SPECIALIZATION ON UNEMPLOYMENT SPELLS AND (RE) EMPLOYMENT HAZARD OF HIGHLY EDUCATED INDIVIDUALS IN ROMANIA

Daniela Emanuela DĂNĂCICĂ¹

Abstract

The aim of this empirical study is to estimate the effect of academic specialization on unemployment spells and (re)employment hazard of highly educated individuals from Romania. A new insight into the problem of unemployment duration and exit destinations of Romanian highly educated individuals is depicted in this paper. A large and complex dataset is analyzed using specific econometric techniques. The obtained results can be useful for labor policy-makers.

Keywords: unemployment; spells; econometric modelling; events; survival; hazard

JEL Classification: J64

Appendix

Table A1. Variables of the study

Unemployment duration	computed as the difference between the exit date and the registration date of individual in the NAE records (days)
Gender	1- Male, 2-Female
Age	Values in between [21-65] years, with the following intervals [less than 25], [25-29], [30-39], [40-49], [50-55], [over 55]
Education ²	Qualitative variable, transformed as follows: 1-university education without BA diploma, 2- university education, 3- university education – master level, 4-university education- Phd level.
Academic specialization	Created from the occupation and ROC variable, with the following categories: 1-individuals with ROC and occupation specific to higher economic studies; 2-individuals with ROC and occupation specific to higher engineering studies, architecture and urbanism; 3- individuals with ROC and occupation specific to higher medical studies; 4 – individuals with ROC and occupation specific to law studies; 5 - individuals with ROC and occupation specific to higher education

¹ Department of Finance and Accounting, "Constantin Brancusi" University of Târgu-Jiu, Târgu-Jiu, Romania. Email: danadde@yahoo.com

² We emphasize that in the dataset there are 23 years old or 24 years old individuals who wrote PhD education in their registration. Since it is not possible to have a PhD completed at this age, we deduced that these individuals are PhD students. Thus, in this educational group we have individual who already finished their PhD studies and PhD students.

Appendix. The Effect of Academic Specialization on Unemployment Spells and (Re) Employment Hazard

	in psychology, sociology, social assistance, pedagogy; 6 - individuals with ROC and occupation specific to higher education in the field of acting, directing, scenography; 7 - individuals with ROC and occupation specific to higher education in geography, history, archeology; 8 - individuals with ROC and occupation specific to higher education in humanities and journalism, 9 - individuals with ROC and occupation specific to higher studies of mathematics, physics, chemistry and biology; 10 - all other individuals belonging to other academic specializations and occupations, 11- unspecified occupation.
Status at the registration date	Qualitative variable, with the following categories: became unemployed; has refugee status; foreign national or stateless person; no job after graduation; no job after detention; no job after repatriation; looking for a job; unemployed without entitlement to compensation; unemployed Government Emergency Ordinance (GEO) 36/2013; wants to change jobs. This variable is useful in descriptive analysis of the dataset.
UI status	0- without UI, 1-with UI
UI value	1- 50% from SRI, 2- 75% from SRI, 3- without UI
Previous work experience ³	0- without previous work experience, 1- with previous work experience
Disability	Presented as a qualitative variable, with the following categories: without disabilities, other disabilities, associated, auditory, physically- locomotor, psychic, somatic, deafblind and visual. Since the number of disabled individuals is small, we will use this information only in the descriptive part of analysis.
Ethnicity	Qualitative variable, transformed as follows: 1- romanian, 2- hungarian, 3- Roma, 4- other EU ethnicity, 5-other non- EU ethnicity and 6- unknown
Area of living	0-rural area, 1- urban area
Region	Created from county variable, with the following categories: 1-North-East region, 2- West region, 3- North-West region, 4- Center region, 5-South-Est region, 6-South-Muntenia region, 7-Bucharest-Ilfov and 8-South-Oltenia region.
Locality type	Qualitative variable, computed as follows: 1-commune, 2-municipality, 3-city, 4-village, 5- Bucharest sector.
NAE training for unemployed	0- unemployed did not participate, 1- unemployed did participate
Newly graduates first-time job seekers or not	, 0- others, 1- first time job seekers graduates
Reason of deactivation from NAE registration	Qualitative variable with 30 different deactivation reasons, computed as follows: 1- (re)employment or obtaining monthly income higher than SRI ⁴ ; 2- deactivation due to expiry of legal period for UI, 3- deactivation due to unemployed own negligence, 4- deactivation due to inactivity (non-

³ Unfortunately, we do not have more information about the previous job, whether it is in accordance with the educational specialization of the individual or not.

⁴ This category includes: the spells deactivated due to long or short term employment/re-employment; the spells deactivated due to the fact that the unemployed earns a monthly income higher than the SRI; the spells deactivated due to fact that the unemployed earns income from copyright or related rights; the spells deactivated due to fact that the unemployed promotes the national residency competition for doctors, thus becoming employed as a resident doctor; the spells deactivated due to fact that the unemployed begins to carry out activities in elective or named positions; the spells deactivated due to fact that the unemployed receives a functioning authorization for income-producing activities on his own.

Appendix. The Effect of Academic Specialization on Unemployment Spells and (Re) Employment Hazard

	participation) and 5-unclear reason of deactivation or without a specified reason for leaving unemployment.
